

Perplexity AI Pricing Documentation

1. Overview

Perplexity provides two main offerings: API (Sonar models) and subscription plans like Pro. API is used for developers, while Pro is for UI users.

2. API Pricing

Pricing is based on tokens and request fees.

Sonar: \$1 per 1M input tokens, \$1 per 1M output tokens.

Sonar Pro: \$3 per 1M input tokens, \$15 per 1M output tokens.

Request cost: approx \$5–\$14 per 1000 requests depending on context.

3. Search API

\$5 per 1000 requests, no token cost.

4. Example Cost

Typical query cost: ~\$0.005 to \$0.01 depending on usage.

5. Perplexity Pro Plan

Cost: approx \$20/month.

Includes UI access, better models, and limited API credits (~\$5).

Does NOT replace API billing.

6. API vs Pro

API is pay-as-you-go and required for automation like n8n.

Pro is optional and mainly for manual use.

7. Recommendation

For automation workflows, use API only. Pro is not required.
